

List of recently completed projects

Waterloo Station, London

BAM was given the contract to build a new concourse balcony to increase the commercial usage of the station. FBS was employed to form all the new complex balcony foundations, suspended escalator pits and slabs within the busiest live station in England. Working on a Network Rail site comes with its own set of unique rules, which we were able to adapt to. This allowed us to work well with both Network Rail and the principle contractor, making the project run smoothly as possible. The package also included soft strip and structural alterations to existing Network Rail offices.

Premier House, Twickenham

Premier house was an office refurbishment job carried out for Wates Construction, we started off doing the builders work package picking up additional work from week to week. We then were awarded the hard landscaping package keeping us working on the project for over a year.

Kingsley Primary School, Croydon

Kingsley Primary School was becoming overcrowded and the local council worked with Wates Construction to extend the school where possible to accommodate the number of pupils. FBS carried out the groundworks & drainage, block work & rendering and external works packages. In total we are close to having spent two years on site working with Wates.

Metro Bank, Reading

This project involved demolishing the corner of an existing shopping mall, which was to be kept open to the public during the works. We used Robotic demolition machines and bobcats to take the building down with minimal disruption, on a site with many width, weight and noise restrictions. During the deconstruction of the building we installed a complex temporary propping system, supporting 4 floors of the building. To enable the temporary works to be removed we installed 80 tonnes of steel to create an open atrium for the bank. We also carried out the groundworks and builders work to this project.

Great Ormand Street Hospital, London

We initially carried out the enabling works package and went on to win the external works including soft landscaping, hard landscaping and tarmac works across the site. There was an element of drainage works carried along with various elements of demolition and brickwork in fills. We worked on this project for a long period of time and completed a variety of works due to our diverse nature.

1A Page Street, Westminster

This was a RC structural package which consisted on forming a new 11 floor reinforced concrete fire wall within the existing lift shaft and service level with capping slab. Strengthening works consisted of forming new RC beams throughout the building and blade walls on existing columns. FBS installed a new 7 ton steel wailing beam to allow a structural cut out of existing slab to form new atrium. Package also included making good of existing soffits, columns and slabs as well as removal of temporary steels throughout the building.

Hammersmith Grove, Hammersmith

We are carrying out the hard landscaping works at Hammersmith grove, laying over 700m² of Chinese granite and constructing many complex stone seating areas and planters. Our works were heavily delayed, due to others, at the beginning of the project and has led to us working 7 days a week to ensure the project was completed on time. We have also carried out the waterproofing and edging detail to the slab of the building, slot Aco channels and making up levels across the site.

The Angel Building, Islington

We carried out a structural alterations package which involved a large amount of concrete cutting and core drilling through existing floors on various levels. In places we removed whole sections of floors, there was a large amount of temporary works needed due to the large scale demolition element here.

Middle Row School, Kensal Rise

At Middle Row we carried out the enabling works, ground works, and block and beam flooring. We had to demolish existing boundary walls with removal of large trees, in their place we erected a timber hording which we painted in BAM colours. There was over 1100m³ of concrete poured on this job which was completed in 12 weeks, which was achieved. We also carried out the drainage works, including installing an attenuation tank. Within the live school we also carried out some dry lining and joinery works.

Regents Quarter, King Cross

We are carrying out the hard landscaping package at Regents Quarter, this involved laying 450m² of slabs within many different areas. The site is highly crowded, meaning we have to be flexible with our approach to getting on with the work. On this project we have also constructed walls and raised planters out of reclaimed yellow stock bricks, including waterproofing the inside of these. We are also looking to take on the soft landscaping package on this project.

Larner Road, Erith

At Larner Road we carried out the enabling works, preparing the site for the delivery of their large site welfare unit. We constructed 40 pad foundations, located a number of manholes, built a small block work substation and installed all the below ground drainage and ducting.

Eastbourne Terrace

We carried out to works to both 10 and 30 Eastbourne Terrace, the work involved pouring new floors on the building, adding concrete up stands and plinths. There was also a large amount of concrete repairs carried out to the existing RC structure. We also carried out the drainage and hard landscaping to these projects. There were a lot of changes as the project went on due to the Cross Rail project running adjacent to the site, we had to adapt and use our experience to help the project along, both, complying to the Cross Rail requirements as well as finishing the works on time.
